ABOUT ME

14+ years of IT experience in design, development, implementation and testing of Client Server, Web Applications using Java/J2EE Technologies and cloud architecture like AWS,GCP etc.

Designing architecture of java and spark application using the spring boot and deploying same application in kubernates cluster by integrating with s3 and few other components.

Experience in design and development of web based applications using Java, JDBC, SQL, ,Microservices, cloud , Servlets, JSTL, JSP, XML, Java API and Spring. Expertise on Core Java Technologies like Multithreading, Collections and Exception handling mechanisms.

RELEVANT SKILLS

AWS, KUBERNATES,JENKINS,JULES

ANGULAR,MICROSERVICE

LEADERSHIP,COMMUNICATION

SHELL-SCRIPT,AWS CLOUD

Alfresco,jBPM

Professional Summary

- Over 14+ years of extensive experience in AI ML, Java, Spring boot, Microservices related technologies.
- Architected scalable Java microservices using Spring Boot, applying industry-standard design patterns for high performance and maintainability.
- Designed and optimized Spark-based big data solutions, ensuring reliability, fault tolerance, and cost efficiency at scale.
- Led the architecture and implementation of Alfresco-based enterprise content management systems, improving document lifecycle and workflow efficiency.
- Built secure microservices architectures with robust authentication and authorization mechanisms (OAuth2, JWT), ensuring enterprise-grade security.
- Developed dynamic and responsive UIs using Angular and JavaScript, enhancing user experience and application performance.

AI & Modern Development Practices

- Hands-on experience leveraging AI-powered development tools (including tools like Devin and GitHub Copilot) to accelerate coding, debugging, and code optimization.
- Applied AI-assisted unit testing approaches using JUnit, improving test coverage, edge-case identification, and test generation efficiency.
- Utilized Generative AI for code refactoring, documentation generation, and rapid prototyping of microservices and APIs.
- Explored and implemented AI-driven solutions such as intelligent document processing, search optimization, and workflow automation within enterprise systems.
- Strong understanding of AI/ML integration with Java ecosystems. including REST-based model serving and microservice orchestration

Agile & Delivery Excellence

- Extensive experience working in **Agile/Scrum environments**, participating in sprint planning, backlog grooming, daily stand-ups, and retrospectives.
- Collaborated closely with cross-functional teams (product owners, QA, DevOps) to ensure **continuous delivery and faster time-to-market**.
- Chned **CI/CD practices**, code reviews, and automated pipelines to improve release quality and consistency.

Citi Bank, Pune
AVP(April-2025 Present)

CRMR BATCH – RWA

CRMR Batch is a large-scale, enterprise-grade Java application designed to process high volumes of trading data for market risk analysis within Citi Bank. The system executes multiple batch jobs that efficiently handle millions of records, ensuring accuracy, scalability, and performance.The application is modular in architecture, comprising more than 20 independent yet integrated modules, each responsible for specific processing functions within the overall risk management workflow. These modules collectively support end-to-end data processing, validation, transformation, and reporting for market risk computations.

Technical

- Designed and implemented AI/ML-driven data pipelines using Apache Spark (MLlib) for predictive analytics and risk pattern detection on large trading datasets.
- Applied AI-assisted development tools (e.g., GitHub Copilot, Devin) to accelerate development, automate code generation, and improve productivity.
- Integrated machine learning models into Java-based microservices for real-time and batch inference, improving decision-making accuracy.
- Built and optimized data preprocessing and feature engineering pipelines using Spark to support scalable ML model training.
- Developed interactive Angular-based dashboards to visualize model outputs, risk insights, and batch processing metrics.
- Implemented RESTful APIs using Spring Boot to expose ML services and enable seamless integration with UI and downstream systems.
- Collaborated with cross-functional teams to translate business requirements into AI/ML solutions aligned with market risk objectives.

Altimetrik ,Pune
Staff Engineer (April-2024 - April-2025)

Wupos 2.1,2.0

WUPOS (Western Union Point of Sale) is a unified transaction processing system used by Western Union agents to send and receive money globally. It streamlines financial transactions by integrating compliance checks, customer verification, and payment processing into a single platform. The system supports multiple payment methods, currencies, and regulatory requirements. WUPOS enhances efficiency, security, and accuracy for agents handling money transfers.

Technical

- Served as a Technical Lead, driving the design, development, and delivery of scalable Java-based microservices and Angular applications.
- Developed and optimized UI components using AngularJS and Angular 14, integrating NG-Zorro for a modern design.
- Identified and resolved vulnerability issues to enhance system security.
- Followed the Merge Request (MR) process for peer reviews and approval.
- Worked in an Agile environment, participating in sprints, stand-ups, and iterative development cycles.

Mphasis, Pune
Project Lead (July 2021 - April-2024)

DPG Tools and Automation, BNYM [06-Jul-2021 - 02-Jun-2022] (Role : Tech Lead)
Involved in design and development of ETL flows using Kafka, apache NIFI and exploring new ETL tools like pentaho. Involved in all ceremony of agile methodology and contributed from development to architectural point of view.

Tech uplift, JPMC[15-Jun-2021 – January 2024] (Role : Tech Lead)
Establishing and overseeing routine data processing tasks, which involve handling substantial data sets, generating reports, and transmitting processed data to downstream applications. Conduct code reviews to maintain code quality, enforce coding standards, and mentor junior team members.

ECCS, JPMC[01-FEB-2024 – April-2024] (Role : Tech Lead)
Proficient in AWS DynamoDB, demonstrated through successful implementation of data insertion strategies for efficient database operations. Skilled in Python scripting for Apache Spark, optimizing data processing workflows. Experienced in developing and executing Python-based test cases to ensure software quality and reliability.

Leadership Skills
- Provide technical guidance and leadership to the team in designing, developing, and maintaining Java microservices.
- Knowledge of containerization technologies (e.g., Docker, Kubernetes) for packaging and deploying microservices.
- Work closely with Dev ops teams to automate build, deployment, and scaling of microservices.
- Conduct and participate in code reviews to ensure code quality and adherence to best practices.
- Use automated tools (e.g., vulnerability scanners) and manual reviews to identify vulnerabilities in your Java microservices code and dependencies.
- Designed and implemented data processing workflows in Spark, improving the processing speed of data pipelines by 1000% compared to traditional methods.
- Utilized Spark RDDs, DataFrames, and Datasets for efficient data manipulation and transformation across large datasets in a fault-tolerant environment.
- Delegate tasks effectively based on team members' strengths and workload.
- Manage team resources efficiently, including budget, time, and manpower.

Tietoevry, Pune
Senior Software Engineer (December 2016- July-2021)

Pension Case Management, Emma Maija As Senior Developer
Partnered with our client to conceive and develop a dedicated pension management portal. This portal serves as a central hub for efficiently overseeing pensioners and their pension-related details.

Dong wind power energy As Senior Developer
Collaborated with a prominent wind energy manufacturing client to implement a robust Business Process Management (BPM) system. This system aimed to optimize and centralize critical manufacturing processes and document management, enhancing operational efficiency within the wind energy generation industry.

Technical accomplishments
- Created and consumed REST APIs using Spring Boot, with a focus on efficient communication between applications.
- Proficient in documenting REST APIs to ensure clear communication and understanding among developers.
- Utilized Maven plugins for resource management and generated minimized resource files to enhance application performance.

- Developed workflows using Activiti within the alfresco platform and JBPM (Red Hat).
- Experience in building applications with Angular 5, including frontend design and development.
- Successfully integrated Angular applications with REST APIs to fetch and display data.
- Configured and customized Alfresco Share for tailored content management solutions.
- Explored Application Development Framework (ADF) and Alfresco Process Service (APS) for frontend development, specifically Angular.
- Implemented sibling and parent-child communication among Angular components for enhanced user interfaces.
- Designed forms in Angular using form builders for efficient data capture.
- Proficient in deploying applications using Docker containers, creating Docker images via Dockerfile, and sharing them on Docker Hub.

Decision Resources Group, Bengaluru
Software Developer Dec 2015 – Nov 2016

Document management solution, [06-Jul-2021 - 02-Jun-2022] As software developer

Played a crucial role in designing a comprehensive business process for document sanitization. This involved active participation in all phases of an agile methodology. Developed a sanitization feature in HTML and created an HTML report document, complete with properties and a tree structure representation, along with various other significant contributions. Designing diverse reports based on various criteria to provide comprehensive insights using the Alfresco ECM platform. Mainly documents were related to drug research. As a frontend, product being used is Drupal.

Technical accomplishments

- Active involvement in every stage of the sprint and agile methodology.
- Developed a sanitization feature using HTML, alfresco web script and java
- Created an HTML report document containing properties and a tree structure representation of children.
- Developing rest API using web script in alfresco.
- Designing alfresco share forms for various types of document and adding aspect based form as well.
- Designing dashlet and rendering dynamic content in it.

Solution Analysts,Ahmedabad
Software Developer 29-Jul-2013 to 24-December-2015

Orbit, As Software Developer

Orbit is a cloud storage application serving as a collaboration hub for multiple cloud-based applications. It offers a range of functionalities, including access to YouTube videos, Google Drive documents, email, and numerous other features. Idea was to combine several Google platforms in to single dashboard based web application.

iSimplyBook, As Software Developer

iSimplyBook is a web-based appointment management system designed to provide appointment solutions for a wide range of businesses. It facilitates the organization of appointments based on business types, locations, contacts, and services. The system also allows users to book appointments and offers advanced filtering options based on location and business type. iSimplyBook is built as a Google App Engine (GAE) application, utilizing jQuery Mobile and the Spring MVC framework for its development.

Legal Document management, As Software Developer

Collaborated in the development and implementation of a robust legal document management portal leveraging the Alfresco platform. This portal serves as a centralized solution for the efficient storage, organization, and retrieval of legal documents, ensuring compliance with legal requirements and streamlining document access for legal professionals and stakeholders.

Yaskawa, As Software Developer

Collaborated in the development of a comprehensive document and workflow management solution for Yaskawa Electric Corporation using Alfresco, enabling efficient document handling and process automation. Designed and implemented over 20 business workflows using jBPM to support diverse operational scenarios. Enhanced workflow capabilities by integrating automated email notifications and reminders to improve process efficiency. Managed multiple document types with seamless integration into workflows and frontend publishing. Additionally, established a replication setup to ensure reliable and consistent content publication across systems.

Technical accomplishments

- Involved in Google map integration in jQuery mobile framework.
- Created user interface using CSS and jQuery Mobile framework.
- Utilized Spring MVC for data management.
- Developed and consumed REST APIs with authentication.
- Configured and customized Share UI, Created custom actions and executing web script on click of an action.
- Developed evaluators and indicators in Alfresco Share.
- Worked on exporting data lists and documents.
- Integrated OCR (Optical Character Recognition) with Alfresco, including tools like Tesseract, Ephesoft, PDF Sandwich, etc., based on business needs.
- Integrated Tesseract, Ephesoft, and PDF Sandwich with Alfresco.
- Developed Audit Web services to fetch and save data using the audit service.
- Implemented authentication for Google Cloud Storage.
- Integrated CK Editor in iSimplyBook application.
- Consumed Google REST APIs for various Google platforms. Managed permissions for Google Drive documents.
- Implemented a widget view for displaying objects.

Axelor technologies,Ahmedabad
Project Trainee January 2013 to June 2013

ERP Solution As Project Trainee

Axelor technologies provides new generation of Open Source ERP, and offers a broad suite of applications to run your business, including financial, human resources, sales and supply chain management.

Technical accomplishments

- Consuming rest API using apache XMLRPC
- Development of magento module in ERP
- Development of Web services in java
- Reflection API of java
